

How cool!

You have just purchased your decorative **PLIC! Kids & Pets!**

PLIC!

DESIGN

Glue!

To apply, please follow the steps below:

1. Choose the application area.
Eg.: living room, bedroom, office, kitchen, etc.
2. Lay modules on the floor to attain the desired layout.
3. Clean the surface with a damp cloth.

4. Remove the protective film from the back.

5. Position the piece on the desired surface and press gently with your hands.

Unglue!

To remove:

6. The adhesive allows you to glue and unglue up to **5 times!** So, if you move, you can take it with you without leaving any mess behind!
Tip: Keep the protective film so you can preserve your Plic! without affecting the adhesive performance.

7. To unglue the pieces, we suggest to use a nylon thread, to avoid damage to the delicate parts. If the adhesive does not yield, try using a blow dryer.

Application Recommendations

- # Adhesion performance is guaranteed 15 days after receipt. Do not unpack if you do not wish to apply immediately. If you already did, place some weight over the pieces to prevent them to bend.
- # Ideal for flat and smooth surfaces.
- # Not recommended for surfaces that are porous, irregular, freshly painted or those that do not allow good adhesion.
- # If the wall has seepage, the glue and unglue will not work and might damage the wall.
- # Not recommended for places subject to humidity and sun exposure.
- # When removing the pieces from the wall, always make sure you do not apply force on the most fragile parts. See instruction number 7.

Cleaning PLIC!

- # We recommend the use of a vacuum cleaner, duster and/or damp cloth.
- # Do not use:

Sponge

Chemical

Steel wool
